The recommendations in this publication do not indicate an exclusive course of treatment or serve as a standard of medical care. Variations, taking into account individual circumstances, may be appropriate.

Listing of resources does not imply an endorsement by the American Academy of Pediatrics (AAP).

The AAP is not responsible for the content of external resources. Information was current at the time of publication.

Brand names are furnished for identification purposes only. No endorsement of the manufacturers or products mentioned is implied.

Every effort has been made to ensure that the drug selection and dosages set forth in this text are in accordance with the current recommendations and practice at the time of publication. It is the responsibility of the health care professional to check the package insert of each drug for any change in indications and dosages and for added warnings and precautions.

The publishers have made every effort to trace the copyright holders for borrowed material. If they have inadvertently overlooked any, they will be pleased to make the necessary arrangements at the first opportunity.

This publication has been developed by the American Academy of Pediatrics. The authors, editors, and contributors are expert authorities in the field of pediatrics. No commercial involvement of any kind has been solicited or accepted in the development of the content of this publication.

Disclosures: Dr DeFoor disclosed a lithotripsy services relationship with American Kidney Stone Management. Dr Wiener disclosed a consulting relationship with Taris Biomedical and a clinical trials relationship with Allergan.

Statements and opinions expressed are those of the authors and not necessarily those of the American Academy of Pediatrics.

Every effort is made to keep *Pediatric Urology for Primary Care* consistent with the most recent advice and information available from the American Academy of Pediatrics.

Special discounts are available for bulk purchases of this publication. E-mail Special Sales at aapsales@aap.org for more information.

Acknowledgments

There are so many people we are grateful for. First and foremost, we would like to thank our patients and their families—who are the real reason we do what we do—for the joy and the many rewards they provide us with on a daily basis. We thank the contributors to the book, and the pediatricians and other health care providers we work with, for their help in caring for our patients. We are grateful to our families for their unfailing support, and we would like to acknowledge those who did the research and science before us, so that we benefit from their efforts. And, finally, we thank our former teachers, who inspired us and instilled in us a desire to serve others, the way they served us.

Introduction

Disorders of the genitourinary system are commonly seen in infants, children, and young adults. In addition, issues of overall genitourinary health are of major concern to parents, schools, and society at large. These issues include socially acceptable urinary continence, renal function, malignancies, and future fertility. As such, pediatric urologists are partners—along with pediatric primary care providers—in the comprehensive care of children of all ages. The intended audience of this book, therefore, includes pediatricians, family practitioners, and allied health professionals.

This *Pediatric Urology for Primary Care* handbook is meant to be a resource to which pediatric primary care providers can turn for practical and contemporary approaches to these disorders. Chapters that deal with the more frequently encountered conditions have been placed earlier in the text. Each chapter has succinct descriptions, with illustrations if appropriate. Clinical pearls are listed for ready reference, and resources for parents and primary care providers are provided at the end of each chapter, including online references. This book can therefore be used by busy clinicians every day and for parent education.

We thank the authors for their hard work and expertise. We are also grateful to the American Academy of Pediatrics and its entire publishing staff for facilitating this endeavor from the outset. Finally, we owe a great deal to Heather Babiar, MS, for her editorial oversight and assistance.

Saul P. Greenfield, MD, FAAP, FACS
Christopher S. Cooper, MD, FAAP, FACS
